

1,160 questions. Worked answers. Nothing typed by hand.

Most interview books give you a question and a paragraph. This one gives you the answer at three levels — what gets you through, what makes you strong, and what earns the extra point — because the gap between a pass and an offer is usually not knowledge, it is how the answer is built. **Every code output in this book was produced by running it.**

WHAT IS INSIDE

69A	Why This, Not That: tool choice & judgement	60
70	Excel, Google Sheets, VBA & BI	87
71	SQL	108
72	Python & pandas	90
72A	Data Structures & Algorithms	62
72B	Data Cleaning & Wrangling	100
73	Statistics, Probability & Experimentation	56
74	Machine Learning	56
75	Product Sense, Metrics & Case Studies	68
76A	Data Analyst & Data Scientist	75
76B	Business Analyst	95
77	Data Engineering & System Design	56
78	Automation & Integration	45
79	GenAI, LLM & MLOps	55
80	Architecture & Leadership	68
81	Behavioural, HR & Offer Conversations	79

Total **1,160**

EVERY QUESTION GIVES YOU

- **A one-line answer** you can recall under pressure, then a tier table: what passes, what is strong, and what earns the extra points.
- **A level and the roles** that ask it — Fresher, Mid or Senior, for analyst, scientist, engineer, BA and architect tracks.
- **The likely follow-ups** and the **red flag** that loses the room.
- **Where to learn it**, naming the chapter and section that teaches the idea.
- **Take-home assignments and mock interviews** to run end to end.

Who it is for. Anyone preparing for a data interview in India — analyst, data scientist, data engineer, analytics engineer or business analyst — from a first job to a senior move.

What it does not do. It makes no promise about salaries, placements or outcomes, and it names no employer. It is a question bank and a method, and the work is still yours.
