

Selling the Interview Readiness Book: Instagram, the website, and one numbering system

Compounza · proposal, 4 October 2026 · for Abhishek, and for whoever builds the website pages.

What we sell, to whom, how Instagram brings them in, what the website does when they arrive, and one numbering system that keeps the books, ads and website saying the same thing.

1 · What we sell: three products, kept separate

Product	What the buyer gets	Price	Status
The Interview Readiness Book	<i>Be Interview Ready</i> : 1,226 data science and analytics interview questions, worked answers, from the online test to the first 90 days	₹500 (working)	Ready
Add-on: The Three Volumes	<i>First Principles, The Working Analyst, Builder to Architect</i> , with the practice files	To set	Ready
Add-on: Projects	Eleven portfolio projects in four tracks, bought one at a time or as track packs	About ₹150 each (working)	Catalogue only; none built

The rule that keeps this clean: each is a separate product with its own page, price and download. The interview book never requires the volumes; the volumes never require a project. The add-ons are offered *after* the first purchase and on the book's page, never forced into it.

2 · Who we sell to: five audiences

Each audience gets its own ads, its own landing page and its own first product. One message for everyone is how ad money is wasted.

Audience	What keeps them up at night	Our hook (from the book)	First buy	Natural add-on
A · Final-year students and freshers	The online test and the campus drive	"Your answer passed the sample test and scored 2/10. Here's why." (Ch 68A)	Interview book	Analyst starter pack

Audience	What keeps them up at night	Our hook (from the book)	First buy	Natural add-on
B • Career switchers (commerce, ops, finance into data)	"Do I know enough to be hired?"	"Why Python and not just Excel?" asked the human way (Ch 69A)	Interview book	The Three Volumes
C • Working analysts, 1–3 years	Switching for a better role	"This one line destroys two-thirds of your dates." (Ch 72B)	Interview book	Data-cleaning series, SQL layer
D • BA and MBA aspirants	No portfolio for a BA role	"'Send me last month's revenue' has four right answers." (Ch 76B)	Interview book	BA requirements pack (P7)
E • Engineers aiming senior	System design and leadership rounds	"99.9% uptime: how much downtime is that?" (Ch 80)	Interview book	Engineering starter pack

Every hook is a real, verified finding from the book, so the ad is a sample of the product — and nobody else can run it, because nobody else has the data behind it.

3 • Instagram: organic first, then paid

The organic engine: four post types, every week

Post type	Example	What it does
Predict the output (carousel)	Show the code, ask "what prints?", answer on the last slide	Saves and shares: people test their friends
The trap (reel, under 45 seconds)	"Your SQL is correct and still fails the online test"	Reach
The ambiguity drill (carousel)	A vague manager request, then the three questions a pro asks	Shows judgement, our differentiator
The proof (single image)	A page from the book, with the real output	Trust: shows nothing is typed by hand

The 1,226 questions are a year of posts. Each ends with one line to the link in bio, which opens the landing page for that post's audience.

Paid ads: small, separate, measured

- **One campaign per audience**, two or three creatives each from its hook. Start with A and C.
- **A small fixed daily budget** you can afford to lose, for about a week before judging; change one thing at a time.
- **Judge by cost per sale, not likes**: rupees spent per book sold, against ₹500 minus fees.
- **Kill, keep, scale**, and turn the winning ads into organic posts.

The rules every ad and post follows

- **No promise of a job, salary or placement**. Promise what is true: 1,226 questions, worked answers.
- **No fake urgency or invented reviews**; real reader comments only, with permission.
- **The ad, the page and the cover use the same words and numbers** (section 5).

4 • The website: what happens when someone taps the ad

The path, one step at a time

Step	Page	What it must do
1	Landing page per audience (/for/freshers ...)	Repeat the ad's hook first, two real sample pages, one price, one button
2	Product page	What is inside, the free sample, the price; add-ons <i>below</i> the buy button
3	Free sample (e.g. §68A.2)	Needs a free account, which builds our audience list
4	Checkout (Razorpay)	One product, one price, clear refund wording
5	Library	Download appears at once; the server confirms it was paid for
6	Add-on offer	After purchase: the volumes, and the project pack for their audience

What the website must and must not do

These come from Compounza's existing rules, and they are binding:

- **The server decides who owns what**: a download works only after the server confirms payment.
- **Minimum data**: name, email, password, purchases. Never phone, age, college or employer.

- **Marketing pages public; material behind a free account.** No chat widget; no claim the books do not make.

Two decisions the website needs from you first

- **Selling books on compounza.in at all.** The server's price table today holds only the BA course (₹1,999, ₹2,999 and the ₹1,000 step-up); the books would be three new products in it.
- **The Instagram pixel.** The site allows three outside services (our server, Razorpay, an email provider); Meta's pixel would be a fourth, which needs your approval. **Recommendation: start with tagged links** (`?src=ig&aud=freshers&ad=72b-dates`) recorded with each sale, and add the pixel only if they prove not enough.

5 · One naming and numbering system

This is what stops the website, the ads and the books from disagreeing.

One catalogue file, the single source of truth

One file lists every product, chapter, bank, question count, price and page address. The covers already count from the book this way; the website should read the same file, so "1,226" is never typed — when the book changes, cover, page and ads change together.

Numbering: three separate sequences that never mix

	Today	Proposed
Interview Readiness Book	Chapters 68, 68A, 69, 69A ... 82 (letters, and numbers that imply "Book 4")	Chapters 1–20 , its own sequence
Question codes	Q71-093 , tied to the old chapter number	Topic codes: SQL-093 , CLEAN-022 , BA-064 — they never change if chapters move
The Three Volumes	Chapters 1–67, plus 83 at the end	Chapters 1–68 without a gap (83 becomes 68), one continuous series
Projects	P1–P11	P1–P11 , unchanged

Why the volumes keep their numbers: the interview book points into them **1,263 times** ("Chapter 25, §25.12"), and every one stays correct; the pointers just gain the volume's name.

Interview book, new chapter (old chapter, question code): 1 How hiring works (68) · 2 The rounds nobody prepares for (68A, ROUND) · 3 The extra-points method (69) · 4 Why this, not that (69A, WHY) · 5 Excel, Sheets and BI (70, XL) · 6 SQL (71, SQL) · 7 Python and pandas (72, PY) · 8 Data structures and algorithms (72A, DSA) · 9 Data cleaning (72B, CLEAN) · 10 Statistics and experiments (73, STAT) · 11 Machine learning (74, ML) · 12 Product sense and cases (75, CASE) · 13 Data analyst and

scientist (76A, DA) · 14 Business analyst (76B, BA) · 15 Data engineering (77, DE) · 16 Automation (78, AUTO) · 17 GenAI and MLOps (79, AI) · 18 Architecture and leadership (80, ARCH) · 19 Behavioural, HR and offers (81, HR) · 20 Take-homes and mock interviews (82).

The work, done once and checked: the volumes point into the interview chapters only **134 times**. One scripted pass renames chapters and codes, fixes those 134, rebuilds all four PDFs with their new titles, and the check scripts confirm nothing is missing or pointing nowhere.

6 • Decisions, and the order to do this

Yours to decide: (1) books on compounza.in; (2) the volumes' and projects' prices; (3) pixel now, or tagged links first; (4) yes to the renumbering pass.

When	What
This week	Renumbering pass and PDF rebuild; the catalogue file; four weeks of organic posts drafted from the book
Next two weeks	Website: two landing pages (audiences A and C), product page, sample, checkout, library
Then	Paid ads for A and C; measure cost per sale for two weeks before adding B, D and E
Alongside	Build project P1, so the first add-on exists when the first buyers arrive
